Forecast for Thursday 23 Dec 2021

Weather: Cloudy through the early hours with patchy light rain and drizzle, but some clear spells developing towards dawn. Then a bright start wit, especially in east, some sunny spells but cloud increasing again towards midday with rain spreading east in afternoon. The rain clears soon after dusk to leave a largely dry evening with clear spells developing.

Chance of cloud free mountain/hill tops above 600m: Around 75% in east, and 30% in west, at first but little chance through the late morning and afternoon. Chances improve considerably through the evening.

Visibility: Occasional or periods of cloud above 450m in west but occasional above 600m in east at first, becoming periods or persistent above 300-450m in the late morning and afternoon before cloud becomes more occasional again in evening. Otherwise visibility good falling to several kilometres in rain and drizzle.

Forecast for Friday 24 Dec 2021

Weather: Dry with clear spells overnight then a bright start. However cloud increases through the morning bringing outbreaks of mainly light rain and drizzle towards midday, the rain turning more persistent and occasionally heavy through the late afternoon and evening, and perhaps turning to sleet over the higher peaks later.

Maximum wind: Westerly 20mph decreasing 10mph by dawn then backing more easterly before increasing 20mph through the late afternoon and evening, with an increasing chill effect.

Chance of cloud free mountain/hill tops above 600m: Around 60% through the morning, falling to near zero around midday otherwise little chance.

Visibility: Occasional cloud through the morning, otherwise periods or persistent cloud, above about 450-600m with patches below. Otherwise visibility good falling to several kilometres in rain and, later, summit sleet.

Temperature: **Valleys:** Plus 5 or 6 Celsius rising to plus 8 or 9 Celsius by day
At 600m: Plus 5 Celsius falling to plus 2 Celsius in evening
Freezing level: Above the summits
